caviLINE

Calcium Hydroxide Liner

Product Description

This product is a calcium hydroxide liner used for capping pulp or protective liner under dental filling materials and cements. The catalyst and base pastes are presented in laminated tubes. The material mixes reliably every time to a smooth creamy consistency to a 'dentin like' colour and self-setting to rigid solid liner that will not inhibit the polymerisation of acrylic and composite restorations.

Features

- Excellent flow characteristics
- Long working time during preparation
- Calcium hydroxide
- Radiopaque
- High compressive strength, low solubility

Benefits

- Easy to apply; seated easily and evenly
- Aids material manipulation outside mouth
- Antibacterial, Promotes reparative dentine formation
- Will appear on radiographs
- Hardsetting, resisting amalgam condensation forces

Indications

- Direct and indirect pulp capping
- Protective liner under dental filling materials, cements and other base materials.

Product Presentation: 13g Base Paste / 11g Catalyst Paste (in tubes)

Shelf life: 3 years from the date of manufacture when supplied in AHL's standard packaging.
